MOTOR PLATE INSTRUCTIONS

Applies to

Part #'s: 3700, 3701, 3702, 3703, 3708, 3698
#3705 (Tabs for mounting)

INSTALLATION:

- 1...Make a cardboard template of the motor plate (you can use the box it is packed in), and fasten template to front of engine.
- 2...Place engine in chassis in whatever location is necessary, taking care to check proper engine alignment with the rear end.
- 3...Carefully mark and trim the cardboard to fit the chassis.
- 4...Using the cardboard as a template, trim the motor plate to size.
- 5...Mount the motor plate on the engine and check the fit.
- 6...Clamp the mounting brackets to the back side of the motor plate and tack weld to the chassis. Remove the plate and finish welding.
- 7...When installing the motor plate on the engine the final time, be sure to use water pump gaskets and sealer between the plate and water pump to prevent leakage.

RELATED COMPONENTS:

C/E Mid-Mount Plates: A Mid mount plate is highly recommended for correctly mounting the rear of the engine.

#3690 Motor Plate Mounting Kit: Designed for tube chassis cars, this kit contains mounting bracket with flats that support the plate in the correct position so it can be bolted in place. Eliminates trying to position the engine with a lift to correctly align the mounting bolt holes.
